Date:

March 29, 2025

Detailed Symptoms

1. Location of Pain:

The strongest pain is located behind the left nipple and is also felt on the opposite side of the body (exact mirrored location).

2. Description of Pain:

Very sharp, pressure-like pain with a sensation that feels cold, hot, and electric.

3. Onset and Duration:

The pain started over five days ago and occurs in episodes.

Episodes are unpredictable in pattern and duration, varying day by day.

The current episode is the most uncomfortable and painful so far.

4. Aggravating and Relieving Factors:

Breathing makes the pain more noticeable.

Caffeine might make the pain worse.

No known specific activities, rest, or medications consistently make it better or worse.

5. Associated Symptoms:

Shortness of Breath: Not sure, but the pain becomes more apparent when breathing.

Heart Sensations: Heart feels slow and painful during episodes, and I do not feel the beats clearly.

Fatigue: Feeling unusually tired.

Dizziness or Lightheadedness: Yes, mild.
